

FIG.2B

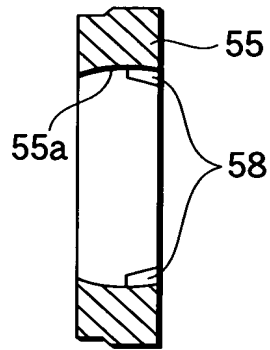

FIG.2A

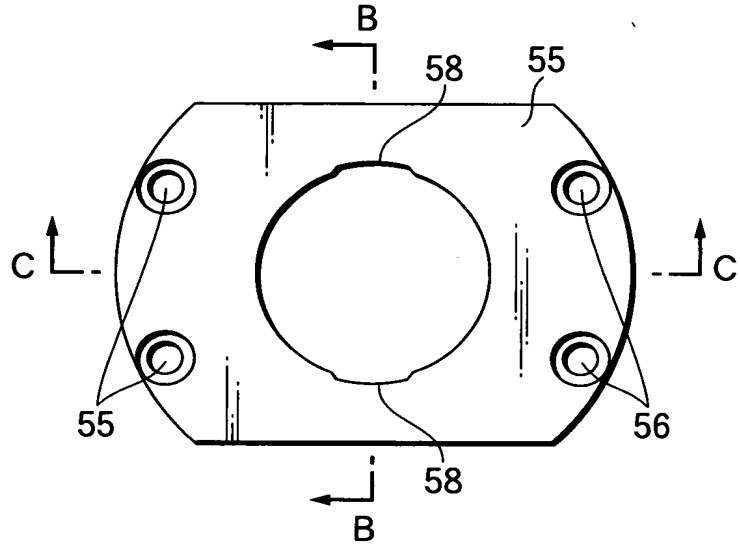

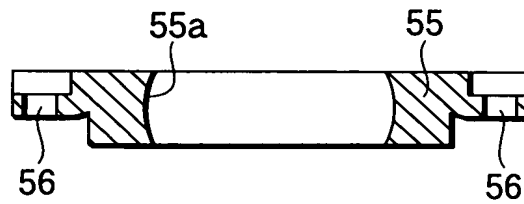

FIG.2C

This technical drawing shows a cross-sectional view of a complex mechanical assembly. The assembly is housed within a main body (1) and features a central circular component (21). On either side of the center are two large, rounded components (31) which appear to be actuators or valves. These are connected to a series of smaller components, including what look like solenoids or coils (36). The assembly is supported by a base (42) which has several rectangular sections (43, 44). The entire unit is enclosed in a protective housing (51) with various mounting points (54, 55) and internal components (16, 50, 52, 53, 54, 55). The drawing uses standard engineering conventions, with hatching to indicate different materials and dashed lines to show internal features.
